

In-Situ Arsenic Remediation in Carson Valley, Douglas County, West-Central Nevada: Usgs Scientific Investigations Report 2010-5161 (Paperback)

Filesize: 8.62 MB

Reviews

These types of book is the greatest ebook readily available. I was able to comprehend every little thing using this published e pdf. I realized this pdf from my dad and i encouraged this publication to discover.

(Dr. Porter Mitchell)

IN-SITU ARSENIC REMEDIATION IN CARSON VALLEY, DOUGLAS COUNTY, WEST-CENTRAL NEVADA: USGS SCIENTIFIC INVESTIGATIONS REPORT 2010-5161 (PAPERBACK)

To download **In-Situ Arsenic Remediation in Carson Valley, Douglas County, West-Central Nevada: Usgs Scientific Investigations Report 2010-5161 (Paperback)** eBook, remember to follow the web link below and download the file or gain access to other information which are have conjunction with **IN-SITU ARSENIC REMEDIATION IN CARSON VALLEY, DOUGLAS COUNTY, WEST-CENTRAL NEVADA: USGS SCIENTIFIC INVESTIGATIONS REPORT 2010-5161 (PAPERBACK)** ebook.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.Conventional arsenic remediation strategies primarily involve above-ground treatment that include costs involved in the disposal of sludge material. The primary advantages of in-situ remediation are that building and maintaining a large treatment facility are not necessary and that costs associated with the disposal of sludge are eliminated. A two-phase study was implemented to address the feasibility of in-situ arsenic remediation in Douglas County, Nevada. Arsenic concentrations in groundwater within Douglas County range from 1 to 85 micrograms per liter. The primary arsenic species in groundwater at greater than 250 ft from land surface is arsenite; however, in the upper 150 ft of the aquifer arsenate predominates. Where arsenite is the primary form of arsenic, the oxidation of arsenite to arsenate is necessary. The results of the first phase of this investigation indicated that arsenic concentrations can be remediated to below the drinking-water standard using aeration, chlorination, iron, and pH adjustment. Arsenic concentrations were remediated to less than 10 micrograms per liter in groundwater from the shallow and deep aquifer when iron concentrations of 3-6 milligrams per liter and pH adjustments to less than 6 were used. Because of the rapid depletion of dissolved oxygen, the secondary drinking-water standards for iron (300 micrograms per liter) and manganese (100 micrograms per liter) were exceeded during treatment. Treatment was more effective in the shallow well as indicated by a greater recovery of water meeting the arsenic standard. Laboratory and field tests were included in the second phase of this study. Laboratory column experiments using aquifer material indicated the treatment process followed during the first phase of this study will continue to work, without exceeding secondary drinking-water standards, provided that groundwater was...
